... and be safe

The forgotten sharps injury

Scalpel injuries are up to 6 times more likely to occur than needlestick injuries. They are particularly common in surgical settings. Regrettably, healthcare organisations and personnel have underestimated the likelihood of these injuries.

Scalpel cuts can result in infections, blood-borne diseases and psychological distress. Serious injuries could require microsurgery to repair a digital artery, nerve and/or tendon.

Many such scalpel injuries can easily be prevented using Qlicksmart's **BladeCASSETTE**, the world's pioneering single-handed blade remover.

The world's pioneering single-handed blade remover

With a stable and compact construction, the BladeCASSETTE is an ideal size for the sterile field.
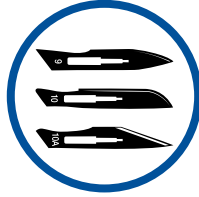

BladeCASSETTE is simple to use with a quick "push, click, and pull" action to remove and contain used scalpel blades.

This easy-to-use solution provides a lower cost alternative to safety scalpels, and allows all scalpel blade users to maintain their preferences for the standard metal handles.

Used together with a hands-free passing technique, BladeCASSETTE can prevent up to 5 times more injuries than a safety scalpel.

BladeCASSETTE can hold up to 3 used surgical blades, and allows for an accurate count and efficient disposal.

It has already been embraced by health-care workers around the world for its unique dual function, cost-saving, and ease of inclusion into custom procedure packs.

Specifications

|				
Colour versions	Red - USA Yellow - International		Material	Polypropylene (PP)
Product Code	QSSVCAS-3		Latex	No
GMDN Code	46236		DEHP	No
